Press Release

Full Line of Straumann® CAD CAM Abutments and Restorations Now Available at Dale Dental

Now Dale Dental offers the fastest, easiest and most affordable way for all US dental labs to get genuine Straumann CAD/CAM abutments and restorations.

Texas, July 1, 2010: Dale Dental is pleased to announce the complete availability of all Straumann CAD/CAM custom abutments, understructures and full contour restorations to all US dental laboratories at the lowest prices and fastest turnaround times.

Using Dale Dental, dental laboratories throughout the US can get 100% genuine Straumann custom CAD/CAM abutments in titanium and zirconium dioxide in bone-level and tissue-level implant platforms shipped with factory-correct genuine Straumann matching screws. Additionally, labs using Dale Dental for Straumann custom abutments can request to have genuine Straumann restorations manufactured and returned with the case.

The full line of Straumann available restorations, which are available for conventional die preparations as well as implant abutment units, include zirconia, titanium, chrome cobalt, resin materials for casting or shaded for temporaries and precision milled IPS e.max® CAD by Straumann CAD/CAM full contour restorations.

Through Dale, all Straumann CAD/CAM restorations are competitively priced, offer fast turnaround times and free shipping options. The result is an easy and cost effective way for any lab to get genuine Straumann abutments and matching screws for use with their Straumann brand implant fixtures. Using these genuine Straumann abutments maintains the original implant fixture warranty and removes any risk and uncertainty that may be associated with "knock off" competitor-type abutments.

In many cases competitor-type abutments use simplified, typically square, connections that merely insert into the Straumann implant fixture. These basic abutment connection designs cannot provide the features, benefits and reliability testing associated with the uniquely designed and tested Straumann abutment interface geometries and genuine Straumann screws.

Dale Dental works directly with all US dental laboratories making it easy for dentists to specify and receive genuine Straumann custom abutments and clinical screws from any dental lab. To learn more and to get started call 888-Get-Dale or visit www.RealStraumann.com.

Dale Dental was founded by David Lesh, CDT in January 2000 and is based in Richardson, Texas. It is the country's first dental technology lab to work exclusively with other dental labs – Dale does not work with dentists. The company's mission is simple: to serve as the country's premier outsourcing supercenter, offering dental labs access to the highest quality, state-of-the-art dental restorations available and providing medical device manufacturers with fast-market access for their products. Additional information on Dale Dental may be found on the company's website at www.DaleDental.com/About.
