### Dale Dental Adds Leading Captek Expert to its Team

All labs have access to precision Captek understructures and world-class expertise

**Richardson, TX, USA, March 31, 2008** - Dale Dental is pleased to announce the addition of Sean Kilmer to its Captek team. Sean has almost a decade of experience with Captek understructures including his position as a Technical Director for the Captek Company where he worked to train labs in Captek manufacturing including Captek's most advanced indications and uses such as long-span bridges. Additionally, Sean served as the Captek department manager at one of the world's largest dental laboratories.

Dale Dental has been offering Captek understructures since 2003 and to date has served thousands of laboratory customers in the US with the widest range of restorative options. "We are thrilled to have Sean as part of the Dale Dental team. Sean's unparalleled expertise combined with the benefits of Dale Dental and our world-class customer service gives every lab a steady and uninterrupted flow of Captek understructures to build their crowns and their business on" says David Lesh, president of Dale Dental.

For decades Captek restorations have captured the benefits of esthetics, biocompatibility, stable high-noble metal pricing and favorable tissue response. As a result, more doctors than ever are prescribing Captek restorations placing strain on labs to meet the demand with their tight labor market and wavering or otherwise absent personnel. Access to Captek understructures by Dale Dental makes it possible for any lab to offer Captek restorations to their doctors without the need to maintain or expand their staff or learn new procedures.

Dale Dental offers Captek copings and bridge frameworks using the full range of Captek Original and the new Captek Nano materials. All Captek restorations by Dale Dental are offered as quickly as next day and at prices that beat most other esthetics-based restorative options. Additionally, Captek's broad span

of time-tested indications makes it a suitable understructure for the most demanding cases, even long-span bridges and indications where all ceramic understructures might not be considered.

Using Dale Dental is easy. All work is done at Dale Dental's ISO 9001:2008 compliant facility in Richardson, Texas and the facility is compliant with the FDA's Good Manufacturing Processes (GMP's). This compliance ensures laboratory customers meet their federal requirement to use only GMP compliant labs for all of their lab-to-lab outsourcing. Additionally, Dale Dental uses only genuine Captek materials in the fabrication of all of its Captek products and includes all manufacturer supplied documentation with each case.

### **About Dale Dental**

Dale Dental was founded by David Lesh in January 2000 and is based in Richardson, TX. It is the country's first dental technology lab dedicated to working exclusively with other dental labs. The company's mission is simple: to serve as an outsourcing supercenter, offering dental labs access to the most state-of-the art dental technology available and providing dental technology manufacturers fast-market access to these labs. Without serving dentists directly, Dale Dental's outsourcing supercenter gives dentists the opportunity to maintain their critical lab relationships without finding new labs for every new product. Additional information on Dale Dental may be found on the company's website at [www.daledental.com](http://www.daledental.com).
